Robotology

As três leis da robótica criadas por Asimov são:

1. **Um robô não pode ferir um humano ou permitir que um humano sofra algum mal**
2. **Os robôs devem obedecer às ordens dos humanos, exceto nos casos em que essas ordens entrem em conflito com a primeira lei**
3. **Um robô deve proteger sua própria existência, desde que não entre em conflito com as leis anteriores.**

First Apparition	Billion Dollar Brain (1967)	
Reality	Movie Fiction / The Computer Exists	

Virtually since the day the first computers were announced, film-makers have been warning us that one day they'd be our undoing. From Hal 9000 (2001: A Space Odyssey (1968)) to WOPR (WarGames (1983)), from SkyNet (The Terminator (1984)) to the supercomputers of The Billion Dollar Brain (1967) and Tron (1982) and the virtual realities of Wolf Am Draht (1973), The Matrix (1999) and eXistenZ (1999), electronic brains have been constantly watching their creators with jealousy, biding their time before attempting - sometimes with success - to wrest control away from we puny humans. One of the most impressive of these cybernetic usurpers was Colossus, the erstwhile defence computer with designs on global domination in Joseph Sargent's mastery Colossus: The Forbin Project (1970) (sometimes simply known as The Forbin Project).

Dr. Butler é um cientista ambicioso que quer controlar o comportamento humano, e conseguindo penetrar no mundo de computadores, transforma tudo numa confusão. Muitos países tomam consciência da situação e do perigo que correm, exigindo, então, uma ação mundial. Dr. Kim, Sheila e Keith estão a cargo da defesa através de uma série de investigação, conseguindo derrotar Butler. Entretanto, derrotá-lo não é fácil. Com a ajuda do mundo eletrônico chamado Anne, Keith é capaz de vencer o "jogo mortal".
